**“Guide to eating fish”:** Fish in watersheds draining into Georgian Bay generally have high levels of mercury. This is due to natural, high background levels of mercury present in the watershed – not man-made contamination. A precautionary approach to fish consumption is recommended. We recommend you search the guide for an alternate large lake in your watershed and apply those consumption guidelines to your area of interest. Extra caution should be exercised by women of child-bearing age and for children.

The *Guide to Eating Ontario Sport Fish* is available electronically at: [www.ene.gov.on.ca](http://www.ene.gov.on.ca).
